Monitoring System

Flight monitors maintenance jobs, success, failures and issues (indexing jobs, backups, dbcc jobs, heartbeats) CPU, Performance issues, unexpected capacity issues and dbcc or integrity checks to protect against corrupted data.

What does Flight Do?

Out of the box *first in it's class* Alerting and Custom Alerting.

- Improve Server Uptime by making Maintenance easier!

- DBAs can do a Health check in under 25% of the time it would otherwise.

- Condense hundreds of messages/alerts/emails.

- Automate the grunt work on Database Health Checks.

- Most DBAs can do a Health check in under 25% of the time it would otherwise.

- Organize and quantifying actionable data for DBAs to inform decision making.

- Linear Regression Analysis and Expert Systems

- Predict Capacity and other problems before they cause downtime.

- Database Environment view is perfect for technical AND non technical executives
